

Company Overview

Founded: 2011

Founder & CEO: Amitava Kundu, PhD

Location: Vienna, Austria

What We Do

Currently, more than 90% of all chemicals, plastics and energy fuels are provided by fossil sources. Due to the impending shortage of crude oil and consequently the anticipated rise in prices, feasible alternatives are urgently required.

ab&cd innovations – a SME in the field of green chemistry – contributes to overcome these problems by developing strategies for the conversion of industrial waste, by-products and biomass into value added chemicals. This research and development is done proactively.

The company also provides custom solutions for industrial firms that have specific waste or by-product related needs. Our custom services include consulting, examination, research and development.

Working closely with our customers we tailor solutions to leverage existing industrial by-products or waste into valuable chemicals.

The creative combination of chemical and biological expertises enables the development of innovative and clean technologies. We provide tailored solutions for the industry and support the establishment of sustainability and Green Chemistry into industrial production and processing.

Additionally, we offer sourcing service for companies looking for sustainable chemicals.

Featured Product

ab&cd innovations has developed a technology for the conversion of glycerol into lactic acid.

The process is especially developed for application in biodiesel production plants. It can be integrated into existing production facilities.

Team

ab&cd innovations links the talents of professionals with different scientific and technological background. A multidisciplinary team, combining smartly Chemistry, Biotechnology and Process Technology, develops sustainable solutions for the requirements of a modern and innovative industry.
